Subject: INDUCTANCE MEASURING

RJ>QST

RJ>Can anyone give me some advice on a good piece of equipment for
RJ>measuring inductances. I have an LCR meter (LCR 195) which I
RJ>purchased from Alpha Elec. several years ago. This meter works great
RJ>for measuring capacitance but just doesn't get it for measuring small
RJ>inductances (uh range).
RJ>Tnx for the help.

RJ>de nz4i Randy

Greetings Randy:

Take a look at the AUTEK RF-1 ANTENNA BRIDGE. It may do the job
for you. AUTEK advertizes in QST.

Subject: Local Radio Jammer?

Hey all. A friend of mine has been enduring Country AND Western music
at work for about as long as he can stand. Are there any pre-existing
files on building a mono-frequency, low-power jammer? Proximity could be
as far as 30' away, or closer if necessary. Any covering signal would
be nice (from dead-air to killer decibels) but cost and ease are our
main concerns.

If you could point me to a FTP site, or some such, I am capable of doing the rest, most likely.

Thanks!

Ken Kopin

Subject: MILLIWATT reprint status

For the benefit of the QRPers who unsubscribed from the qrp mailer--the reprints of The Milliwatt go to UPS on Monday, or so N8ET tells me. If you have not received an e-mail from me telling you that you are paid up, let me know immediately; there are lots of folks with reserved copies, and those will go on the open market soon if not claimed (ie, paid for). 73 and Queue Our Pea DE WA8MCQ

Subject: MILLWATT reprint status

Forthe benefit of those QRPers who expressed interest but are no longer subscribed to the QRP mailing list: Bill takes the pile to UPS on Monday. There are many people who expressed interest but never followed up; others said a check is in the mail but it was never received. I'll post a list of names soon so you can firm up your reservation if you wish. 73 and Queue Our Pea DE WA8MCQ

lengthy post deleted to save bandwidth.

I got several pieces of e-mail, and saved Gary's post for further experimentation.

Anyone else have any ideas? Or want to talk about powering the thing up using lemons for batteries? Or stuff like that?

Thanks for your post gary, I'll try some of the things you suggested. I just think it's neat to make something marvelous out of virtually nothing. :)
